EXAMINEE ID:	Not Specified	EXAMINER:	K. Miller
GENDER:	Male		

Tests Administered: WNV (6/8/2007) **Age at Testing:** (10 years 5 months)

Is this a retest? No

About the WNV

Daniel was administered the Wechsler Nonverbal Scale Of Ability (WNV) on 6/8/2007. The WNV is used to assess the general cognitive ability of individuals aged 4 years to 21 years. This test provides a Full Scale score.

How WNV Scores are Reported

The scores show how well Daniel did compared to a group of individuals the same age. The highest possible score is 170 and the lowest possible score is 30. Half of all individuals will score less than 100, and half of all individuals will score more than 100. Scores from 90 to 109 are average.

A percentile rank is also given. This shows your child's rank in the national comparison group. If the percentile rank was 45, for example, it would mean that he scored higher than approximately 45 out of 100 individuals his age.

When reviewing Daniel's scores, remember that no test is perfectly accurate. Any person might score slightly higher or lower if tested again on a different day.

WNV Test Scores

Scale	Score	Percentile Rank	Qualitative Range
Full Scale Score - 4	92	30	Average

Daniel's Full Scale score is 92. He scored higher than approximately 30 out of 100 individuals his age. His general cognitive ability, as assessed by the WNV, is in the Average range.
